

How ReeceThomas Marine Collagen is Changing the Face of Natural Beauty

ReeceThomas' breakthrough collagen cream proves that the answer to younger-looking skin is sea deep.

When it comes to the absolute best anti-agers, **collagen** is every woman's superhero.

Making up one-third of the protein in the human body, collagen is found deep in the dermis of our skin, providing plumpness, elasticity and structural support. These qualities give skin its full, firm, youthful appearance.

Unfortunately, our bodies lose precious collagen as we age, thanks in part to sugary diets and environmental threats, such as UV exposure and pollution.

Between the age of 18 and 25, collagen production starts to decline and continues to do so every year thereafter. Without sufficient collagen, signs of aging, like fine lines, thinning and sagging, begin to emerge. The result is a stern, tired appearance -- even if you feel happy and well-rested.

Bottom line: We all need collagen to maintain a youthful look over time.

What is THE Way to Deliver Nutrient-Rich Collagen to the Skin?

In the last few years, the wellness marketplace has seen a surge in collagen supplements, and even collagen powders that you can pour into coffee or a beverage of your choice. Touted as the new miracle treatment by bloggers and influencers, these supplements *suggest* that you can 'sip' your way to a younger-looking face.

In theory, the idea of drinking a collagen-infused beverage or popping a collagen capsule for a healthier complexion sounds worth a try. But it also demands we ask a crucial question...

Does ingesting collagen *actually* work? Can consuming collagen transform the skin on your face?

Remember that YouTube testimonials and blog reviews differ from credible experts disclosing the efficacy of ingestible collagen, as demonstrated by a clinical study. And the fact is, there is little evidence to suggest ingesting marine collagen benefits the skin at all.

Despite popular belief that collagen supplements can help strengthen our skin, we have little data to truly support this.

-- Dr. Joshua Zeichner, New York City-based Dermatologist

Collagen is a large molecule. When you consume it, it gets digested by your intestines and broken down into smaller pieces. In other words, when you ingest collagen powders or supplements, your skin isn't benefiting from the full collagen molecule.

On top of that, fans of ingestible collagen assume that the collagen, when ingested, goes straight to the face. The truth is, when you drink collagen, it doesn't know to go to your face to improve its appearance. It doesn't 'know' to go to one part of the body versus another to build collagen!

The verdict: You can't 'eat' collagen to build collagen in the face.

(What's possible?)

But If it's Real Results You're After...

Instead of taking a chance on pills and potions, there IS a skin-reviving method that dermatologists and aestheticians agree on: *topical collagen*.

This method is a tried and true way to:

- **Add attractive volume to the face, subtly and non-invasively;**
- **Improve firmness, helping to combat sagging, slackening skin;**
- **Hydrate the skin, creating a plumper-looking complexion; AND**
- **Create a face that looks younger, brighter and less tired.**

But what type of collagen should you introduce into your skincare routine? There are many products on the market that can easily confuse customers, so here's where we set the record straight.

First, it's important to read the labels and look for **two key attributes**...

1 - Type I Collagen

Type I collagen is the most abundant type of collagen in the human body, acting as both the foundation and essential building block of our skin's structure. Type I collagen is found in your skin, eyes, tendons, bone, and teeth, but it also serves a major cosmetic function. One of its amazing cosmetic benefits is that it helps minimize fine lines and wrinkles and improve skin elasticity and hydration.

Now, how exactly is type I collagen sourced? **The go-to source for high concentrations of type I collagen is...**

2 - Marine Collagen (Fish & Algae)

Fish collagen is an abundant type I collagen source, giving extraordinary strength and support to our skin. Fish collagen is loaded with both antioxidant and *specific* amino acids -- glycine, hydroxyproline and proline -- that help stimulate skin cells and collagen synthesis.

Fish collagen is extracted from either the meat, bones, fins or scales of cold sea fish. Since these parts are considered waste products during fish processing, using them to create other products like topical skin care creams, helps reduce environmental waste.

Yet another superpowered source of type I collagen is **marine algae**. They may be the bottom of the ocean, but in the skincare world, **algae** is at the top of the anti-aging pack.

These living plant organisms are chlorophyll-containing organisms in a family that includes more than 20,000 different known species. Thanks to their nutrient-dense makeup of proteins, amino acids and minerals, marine algae can help to slow down cellular aging, promote a healthy glow and stimulate collagen to add lift and fullness. In short, these living plant organisms do wonders for dry, dull and aging skin.

Although there are thousands of species of algae growing under the sea, the following two types are the main ones you should know about:

Brown Algae

Brown algae are the oldest and most studied form of algae. Because of its super antioxidant powers, brown algae does an incredible job of combating free radical oxidation that causes our skin to age.

Green Algae

Green algae are full of phytochemicals, one of which is a potent antioxidant called astaxanthin. More specifically, chlorella, a type of single-cell green algae, fights inflammation and irritating free radicals that interrupt our melanin production. This makes for a more even skin tone.

A Collagen Reality Check

Now that you understand collagen's all-important role in better-looking skin and that we all lose precious collagen as we age...

Now that you understand why ingestible collagen cannot target facial skin to deliver anti-aging benefits...

Now that you know the majority of our skin is made up of type 1 collagen...and that the best source of type I collagen is marine collagen...

There's only **one bonafide skin-beautifying solution you need...**

Introducing ReeceThomas Marine Collagen Anti-Aging Cream: The New Frontier of Skin Renewal

After trying dozens of collagen creams in the marketplace, we discovered that they all lacked **skin-critical type I marine collagen**. So we set out to create a collagen cream of our own. The result is ReeceThomas Marine Collagen Anti-Aging Cream -- a rare product that has put a high concentration of **this all-star ingredient** into an affordable, complexion-perfecting cream.

Type I Marine Collagen Helps Skin ‘Bounce’ Back

ReeceThomas Marine Collagen cream harnesses type I marine collagen from **three powerful sources** in the Atlantic Ocean and Mediterranean Sea: fish, brown algae and green algae.

To dramatically alter visible aging, ReeceThomas utilizes not only marine-based ingredients, but other **natural wonders** that have the surprising ability to renew and refresh your skin:

Mimosa Tenuiflora

Mimosa Tenuiflora, or Tepezcohuite, is an ingredient derived from a tree native to Southern Mexico and other parts of Latin America. Mimosa contains ingredients like tannins and flavonoids, each of which have soothing properties that help heal skin. A great way to preserve your skin's health and slow the aging process, mimosa is also known to help diminish the appearance of skin blemishes and wrinkles, exfoliate dead skin cells and promote cellular regeneration.

Ginkgo Biloba

In addition to improving the collagen production, ginkgo biloba has been found to improve the skin's protection from UVB rays. This herb contains many antioxidants including quercetin, a natural flavonoid with anti-inflammatory properties. These antioxidants help protect your skin from environmental hazards by restricting the production of free radicals. As a natural cleanser, ginkgo biloba will help rid your skin of unwanted debris, dirt, oils and other impurities.

Rosa Damascena

Our collagen cream is infused with Rosa Damascena (rose essential oil), which provides rich emollience to the skin. The antioxidants in Rosa Damascena help to fortify skin cells and revitalize skin tissue.

Acacia Decurrens Extract

For an aromatherapeutic effect, we've extracted essential oil from the flowers of the Acacia Decurrens tree. This extract helps calm and soothe the senses, without being overpowering or irritating the skin. It gives ReeceThomas Marine Collagen cream the appealing scent and texture of a luxe balm without the luxe price tag.

For Lines and Wrinkles...and Everything in Between

By combining multiple collagen boosters into one super-hydrating cream, ReeceThomas has created one of the most powerful age-fighting skin care solutions available. Together, these ingredients create a luxurious, multitasking cream that can be used AM or PM to make your skin look and feel more youthful.

With ReeceThomas Marine Collagen Anti-Aging Cream, you can enjoy:

- Bouncier, cushier skin
- A smoother complexion
- A supple, glowing appearance
- Softer texture, thanks to instant, weightless hydration
- Quickly absorption, leaving behind no oily residue
- **The full-spectrum cosmetic benefit of the best anti-aging collagen source available: type I marine collagen.**

Ready to Deal with Aging For Real?

If your face is starting to look dull or hollow...

If your skin is starting to look a bit craggier and crepier

If your moisturizer is no longer a match for emerging lines and wrinkles...

Then ReeceThomas Marine Collagen Cream may be the solution you've been waiting for.

You no longer have to dream about your dream skin. Or fall prey to deceptive collagen powder claims. With ReeceThomas Marine Collagen cream, you can age-proof your skin on your own terms.

Justification for selection:

- Outdoor images with natural backgrounds convert better, so I tried to select photos with those characteristics.
- Real women with great skin who look like they 'could' be actual customers

40-ish woman; Blue conveys trust:
